

# conference OVERVIEW

From September 20 to 23, 2001 scholars from the United States and Europe will join University of Florida faculty in Gainesville to explore the drive for unity that lies behind past and present investigations of nature. At the same time, participants will identify and assess why this drive has sometimes been abandoned and what consequences, positive and negative, have resulted.

The format of the conference includes five plenary sessions that focus on specific contexts in which questions about the function of unity in nature can be raised. Three scholars will consider each context, one from a primarily historical viewpoint, another with an eye to developments in the more recent past, and a commentator who will provide an overview. Where possible, participants are encouraged to look beneath the surface of any social consensus about the role of science in the past or in the present, and to examine any deep-seated and lasting visions of nature and humankind that have endured over time in spite of changing articulations of the contents of science.

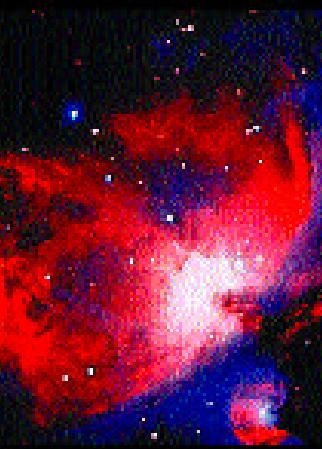

For more information, please contact:

# Unifying NATURE

## Past & Present

September 20-23, 2011  
University of Florida  
History Conference Room  
005 Eure-Fluit Hall

### Conference Schedule

**Friday, September 23**

**Session 1: 8:00 am—12:00 pm**

**Nature Writ Small: the Atom**

If one day represents human kind's attempt to understand itself in the world of the very large, quantum theory goes to the other extreme. Natural scientists have not yet been able to make considerations of the world of the very small compatible with those of the very large. What need is met in the assumption that such a unification can be accomplished? What assumptions lie at the basis of the age-old conviction that in the breaking up of reality into corporeles or atoms lies a path-way to understanding? What kind of understanding is it that is sought in this way? A historical consideration of the development of a tension in science helps make clear its successes and limitations. Contemporary quantum theory has added new dimensions to this historic quest that expose the deep-seated challenges entailed in the participation of reality. What opportunities exist here for new insights into the enduring but opposed human convictions that in taking reality apart we approach closer to an objective representation of nature, but that we simultaneously truncate aspects of a unified view of humankind's relation to nature!

**Speaker**

"Atoms in Chemistry: Divisible or Divine?"

John Hedley Brooke

*Andreas Idres Professor of Science & Religion  
Oxford University*

**Commentator**

Ernst Peter Fischer  
*Professor für Wissenschaftsphilosophie  
Universität Konstanz*

**Speaker**

"Atoms in Chemistry: Divisible or Divine?"

John Hedley Brooke

*Andreas Idres Professor of Science & Religion  
Oxford University*

**Commentator**

Silvan Schmidler  
*Professor of Physics and Richard Kirken Professor  
of the History of Ideas  
Brandeis University*

**Speaker**

"Our Universe—A Cosmos?"

William B. Dose

*Wimberly Brinley Professor of Philosophy of  
Nature and Technology  
Tzuven University, Eastende, The Netherlands*

**Commentator**

Holger Kragh  
*Professor of History of Science  
University of Aarhus*

**Speaker**

"Our Universe—A Cosmos?"

William B. Dose

*Wimberly Brinley Professor of Philosophy of  
Nature and Technology  
Tzuven University, Eastende, The Netherlands*

**Commentator**

Anna Harrington  
*Professor of History of Science  
Harvard University*

**Speaker**

"From Hunter to Wilson: Functions of  
Unification in Modern Biology"

V. Barry Smocovitis

*Associate Professor of History of Science  
University of Florida*

**Commentator**

Thomas Soderqvist

*Professor and Chair, Department of History of  
Medicine  
University of Copenhagen*

**Sunday, September 23**

**Closing Panel: 8:30 am—12:00 pm**

**Summary and Overview**

**Klaus Wendtung**

*Stephen McKnight  
Professor of Germanistik  
University of Florida*

**K. Ludwig Pfiffer**

*Professor of Anthropology  
University Siegen*

**Commentator**

"Holistic Health: Risks and Benefits"

Frederick Gregory

*Professor of History of Science  
University of Florida*

**Commentator**

"The Peril of Holistic Health: Risks and Benefits"

Allen H. Neals

*Professor of Pharmacology and Therapeutics  
University of Florida*

**Commentator**

"Holistic Medicine Killed Holistic Health"

Dietrich von Engelhardt

*Director, Institute for Medicine and  
Wissenschaftsschicht  
Martin-Luther-Universität Halle-Wittenberg*

**Speaker**

"From Hunter to Wilson: Functions of  
Unification in Modern Biology"

V. Barry Smocovitis

*Associate Professor of History of Science  
University of Florida*

**Commentator**

"From Hunter to Wilson: Functions of  
Unification in Modern Biology"

W. Barry Smocovitis

*Associate Professor of History of Science  
University of Florida*

**Speaker**

"From Hunter to Wilson: Functions of  
Unification in Modern Biology"

V. Barry Smocovitis

*Associate Professor of History of Science  
University of Florida*

**Commentator**

"From Hunter to Wilson: Functions of  
Unification in Modern Biology"

W. Barry Smocovitis

*Associate Professor of History of Science  
University of Florida*

**Speaker**

"From Hunter to Wilson: Functions of  
Unification in Modern Biology"

V. Barry Smocovitis

*Associate Professor of History of Science  
University of Florida*

**Commentator**
